NOTICE OF REAL ESTATE ASSESSMENT CHANGE - THIS IS NOT A TAX BILL

2010 Assessed Value of Property

Total:

\$1,112,000

This amount was allocated between land and building as follows:

Land:

\$1,112,000

Building:

\$0

2011 Assessed Value of Property

Total: \$767,000

This amount is allocated between land and building as follows:

Land:

\$767,000

Building:

\$0

REASON(S) FOR CHANGE:

REASSESSMENT

~ See Peverse Side for Appeal Information ~

A).

Dear Fairfax County Taxpayer:

During 2010 the residential real estate market continued to improve in Fairfax County. This market improvement has meant fewer foreclosures, faster sales and price appreciation in many residential neighborhoods. As a result, almost 64% of residential properties have experienced an assessment increase, while 22% have no change in assessment for 2011. Assessment changes vary by neighborhood however, and dependent on the sales data some properties may have changed at a rate different from the County-wide average.

The Department of Tax Administration (DTA) uses professionally recognized mass appraisal techniques to assess the market value of properties. This includes a review of the average assessment-to-sales price ratio (ASR) for each assessment neighborhood. The ASR analysis compares the 2010 assessments to actual sale prices that occur during the year. The relationship between the 2010 assessment and subsequent sale price helps determine whether an assessment adjustment is necessary for 2011. As sale prices increase during the year, the existing ASR generally decreases (an inverse relationship), suggesting the need for assessments to be increased. Again, however, not all sale prices change uniformly throughout the County, and assessments are adjusted based on an analysis of actual sales data and comparable properties within neighborhoods.

Like other Virginia jurisdictions, DTA appraisers use market sales and cost data to determine residential property assessments. Field surveys and other data are also used to help compare property sales based on comparable physical characteristics. While market sales data provides the ultimate framework for assessing residential property, staff also analyzes depreciated "cost" information to help determine the appropriate assessment level. The assessed value allocated to land this year remains a relatively constant percent of the total assessment.

For commercial income producing properties such as office buildings, the capitalized income approach to valuation is the principal assessment methodology used to assess market value.
